

Math

Each week I will highlight a math game or activity. Learn it, play it, teach it to others (siblings, parent, grandparent over the phone, etc.) if possible!

Flower Shop

- Pretend you own a flower shop. Make a list (with pictures) of the flowers you sell. How much does each flower cost? Ask a family member to buy some flowers from your shop. Add up the total cost of their flowers.
- What else could you sell at a flower shop? Add more items to your store. Practice buying and selling different items. Make change for your customers. Use play money if you have it or draw and make your own.
